Forecast for Thursday 13 Jun 2024

Weather: Dry in the early hours with some brightness. Cloud becoming extensive through the morning, with persistent rain, heavy at times, mainly focused over south or southeastern facing aspects. Drier in the evening but low cloud remaining. Strengthening southeasterly winds with summit gales.

Chance of cloud-free hill tops above 700m: 70% at first, falling to 30% or less through the morning.

Low cloud and visibility: Some clear spells and any cloud mostly above 1000 metres at first. Cloud becoming more extensive through the morning and falling to 300-500 metres, with visibilities dropping poor in persistent rain or hill fog.

**Level above which ground is expected to be frozen/snow is expected to settle.*

Meteorologist's View

Persistent heavy rain focused on south or southeastern-facing upslopes will make for difficult navigation and soaking conditions. Gusts above 55-60mph will give difficult walking conditions with progress highly impeded and a significant risk of being blown over.

Forecast for Friday 14 Jun 2024

Weather: Early low cloud and drizzle pushing north through the morning. Clearer spells and scattered heavy showers with a chance of thunder developing through the afternoon.

Maximum wind: Southwest 25-30mph gusting 35-40mph at first, easing through the day.

Chance of cloud-free hill tops above 700m: 30% at first, rising to 50% through midday, and 70% in the evening.

Low cloud and visibility: Fairly widespread areas of cloud down to 400-500 metres at first. Cloud lifting and breaking through the day with bases often above 1000 metres, but falling down to 700-800 metres as any heavy showers pass through.

Temperature: **Valleys:** Plus 10 rising to plus 14 Celsius.
At 700m: Plus 6 Celsius.
Freezing level: Above summits.
